Assignment 01

Notebook LM— Hands-On Exploration

Student Name	Noman Shakir
Registration No.	FA22-BSE-115
Course	AI Tools & Applications
University	COMSATS University Islamabad, Abbottabad Campus
Submission Date	28 June 2026

About This Assignment

This assignment explores Google Notebook LM, an AI-powered research tool that transforms source material into interactive study aids. A notebook was created, populated with course-related sources, and all major Studio tools were applied to generate a variety of AI-powered learning artifacts.

Studio Tools Used

Studio Tool	What It Does
 Flash Cards	Auto-generated question & answer cards from source material
 Mind Map	Visual map of key AI concepts and their relationships
 Video Overview	Short AI-narrated video summary of the notebook sources
 Images	AI-generated visual illustrations supporting the topic
 AI Quiz	Interactive quiz generated from notebook content
 Reports	Remaining documents (study guide, briefing, FAQ, timeline) — uploaded to GitHub

 Remaining documents (reports, study guide, briefing doc, FAQ, timeline) are uploaded to GitHub.

What I Learned

- Notebook LM can instantly turn PDF notes and YouTube links into interactive study tools without manual effort.
- The Mind Map tool reveals connections between concepts that are easy to miss when reading linearly.
- Audio and Video Overviews are extremely useful for revision — listening is faster than re-reading notes.
- The AI Quiz feature helps with active recall, which is proven to improve long-term retention.
- Flash Cards auto-generated from sources save significant time compared to making them manually.
- All Studio tools together create a complete, multi-format study environment from a single source upload.
